

PROOF OF CONCEPT · SOLUTION
ENGINEERING

Secure Multi-Agent Sales Assistant

Governed AI for MSX-Style Opportunity and
Milestone Management

A secure, human-in-the-loop AI system that helps Solution Engineers manage opportunities and milestones with security and governance at the center.

Amanda Tran

MY JOURNEY SO FAR

SYSTEMS ENGINEERING INTERN AEROSPACE INDUSTRY

- Engineered workflows & automation
- Built dashboards & internal systems
- Coordinated teams & improved operations

BUSINESS INTELLIGENCE INTERN CONSUMER GOODS / MANUFACTURING INDUSTRY

- Designed dashboards & reports
- Transformed data into actionable insights
- Partnered for data-driven decisions & improvements

SECURITY & SOLUTION ENGINEERING INTERN (CURRENT) TECHNOLOGY INDUSTRY

- Building AI-powered business apps
- Designing multi-agent systems & automation
- Exploring Microsoft Security technologies & governance
- Enhancing collaboration & customer engagement

LEADERSHIP & COMMUNITY IMPACT STUDENT COMMUNITY LEADERSHIP

- Led executive team & large-scale events
- Built partnerships & connected students to opportunities
- Drive engagement through outreach & community initiatives

MY VALUES

INTEGRITY
Do the right thing, always.

CURIOSITY
I ask questions and seek to understand.

IMPACT
I focus on meaningful outcomes.

COLLABORATION
I achieve more together.

INCLUSIVITY
I value diverse perspectives and lift others up.

Amanda Tran

SECURITY & SOLUTION ENGINEERING INTERN

Building secure, intelligent solutions that empower people and drive impact.

Curious Problem Solver

Driven by Impact

People-First Collaborator

WHO I WORK WITH

Solution Engineers

Program Managers

Security Engineers

Product Managers

Data Analysts

Designers & Stakeholders

Cross-functional collaboration is at the heart of everything I do.

WHAT I DO

BUILD

Build AI-powered apps and multi-agent solutions

AUTOMATE

Automate workflows and processes to improve efficiency and collaboration

SECURE

Apply security and governance best practices with Microsoft Security

ENABLE

Enable knowledge sharing, customer engagement and Solution Engineering excellence

TOOLS & TECHNOLOGIES

MICROSOFT CLOUD & AI

MICROSOFT SECURITY

LEADERSHIP & COMMUNITY IMPACT

Led and motivated large teams to deliver initiatives and impactful events.

Built partnerships that created value for students and organizations.

Communicated with purpose and inspired collective action.

WHAT'S IMPORTANT TO ME

CONTINUOUS GROWTH

MEANINGFUL RELATIONSHIPS

BALANCE & WELL-BEING

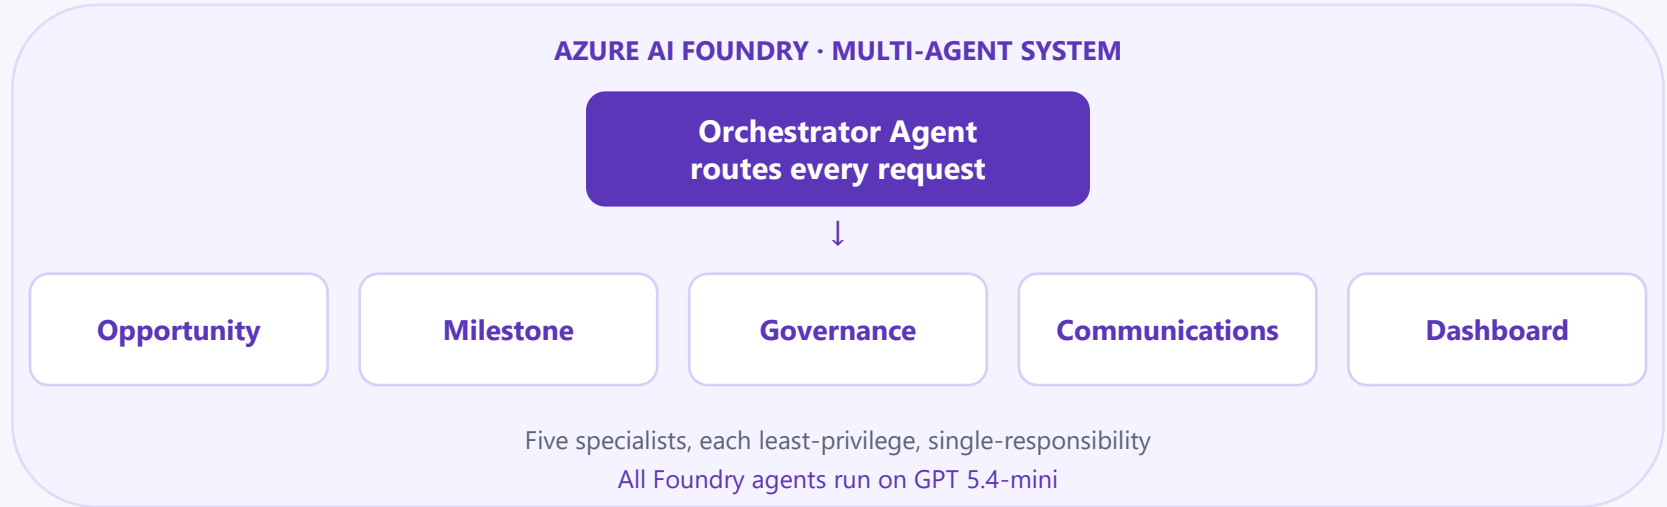

MAKING A DIFFERENCE

Purposeful work. Positive impact. A better future.

ARCHITECTURE

What I Built

One orchestrator routes every request to five least-privilege specialist agents.

SECURE BY DESIGN CHOICE

Security is built into the architecture

Three constraints govern what agents can do, enforced before any action reaches a business system.

	DESIGN DECISION	ARCHITECTURAL ENFORCEMENT	SCOPE / EVIDENCE
01	HUMAN-IN-THE-LOOP APPROVAL	Agents recommend. Humans approve every write and message.	Milestone changes Outlook • Teams
02	LEAST PRIVILEGE BY SPECIALIZATION	Five specialists, each with only the tools its role requires.	Dashboard • Communications Governance
03	COMPLETE AUDITABILITY	Every requested, approved and executed action is logged.	Request • approver Action • timestamp

Security is enforced through architecture, not prompt instructions.

SECURITY

Security Controls

A layered model of identity, data and monitoring controls, all built on Microsoft's security stack.

01

IDENTITY & ACCESS

Microsoft Entra ID

Conditional Access blocks untrusted locations; app roles enforce least privilege.

02

DATA PROTECTION

Microsoft Purview

DLP policies guard PII and PCI in every AI-generated response.

03

THREAT MONITORING

Microsoft Defender

Continuous detection, including AI-specific prompt injection.

LIVE DEMONSTRATION

DEMO Time!

07

See the secure workflow in action.

REVIEW

/

APPROVE

What Didn't Work and Why

Building the AI wasn't the hard part; security, identity, governance, and platform limits were.

01 PLATFORM

Power Platform & Dataverse

LIMIT

DLP blocked direct writes to Dataverse.

RESPONSE

Pivoted to Azure AI Foundry pro-code.

02 IDENTITY

Delegated User Identity

LIMIT

Agent identity could not inherit user permissions.

RESPONSE

Adopted On-Behalf-Of access.

03 INTEGRATION

Copilot Sales Integration

LIMIT

No public API for Microsoft's first-party Sales Agent.

RESPONSE

Deferred until the platform supports it.

KEY LESSON Secure, auditable, and compliant before it can be trusted.

If I Had More Time

Six tracks to take this from proof of concept to an enterprise-ready platform.

6

PRIORITY TRACKS

- 01 Tribal Knowledge Retrieval with OneNote
- 02 Agent 365 Onboarding & Governance
- 03 Executive Governance Dashboard & Automated reporting
- 04 Persona-Based Communications
- 05 Audit Log Integration with Microsoft Sentinel
- 06 Further Develop CSA Handoff Process

KEY MESSAGE From proof of concept to an enterprise-ready platform.

Extending the Assistant for CSA Readiness

Earlier visibility • Cleaner handoffs • Clearer next actions

01 UNIFIED AWARENESS

Unified Contract Awareness

Yes / No before partner work, funding, or handoff. Flag overlap, expiry, and missing CSA/CSAM involvement. Recommend the conversation—not coverage.

CSA BENEFIT

Earlier engagement, less duplication, and better partner coordination.

02 CLOSE-DATE QUALITY

Close-Date Quality Alerts

Use non-blocking alerts near close. Check context, next steps, commitments, and handoff coverage; notify the owner and escalate unresolved risks.

CSA BENEFIT

Cleaner data and fewer last-minute handoff gaps.

CONCLUSION

**The goal was never
autonomous AI.**

The goal is trusted AI.

Thank you.
